8. (New) A method of insuring against satellite failure including rescue reservations comprising the steps of:

purchasing a satellite for orbiting the earth;

obtaining a launch insurance policy including a rescue mission provision from a guarantor covering the unintended launch of the satellite into an unintended orbit, the rescue mission provision providing for the payment for initiation of a rescue mission, as opposed to simply paying out money to the insured, in the event that the satellite is launched into an unintended orbit, the rescue mission provision specifying that the rescue mission shall result in the movement of the satellite from an unintended orbit to an intended orbit;

unintentionally launching the satellite into an unintended orbit so as to trigger the rescue mission provision;

paying for the initiation of a rescue mission by the guarantor; and

initiating a rescue mission and moving the satellite from the unintended orbit to an intended orbit.

9. The method of insuring against satellite failure of claim 8 wherein:

the rescue mission provision includes providing for moving an unmanned extension spacecraft within proximity of the orbiting satellite, mechanically connecting the extension spacecraft to the orbiting satellite to form a docked satellite-spacecraft combination, moving the satellite-spacecraft combination using the control systems of the extension spacecraft.

10. The method of insuring against satellite failure of claim 8 further comprising the steps of:

moving an unmanned extension spacecraft within proximity of the orbiting satellite;

mechanically connecting the extension spacecraft to the orbiting satellite to form a docked satellite-spacecraft combination; and

moving the satellite-spacecraft combination using the control systems of the extension spacecraft.

11. The method of insuring against satellite failure of claim 8 further comprising the steps of:

obtaining a rescue mission failure insurance policy from a guarantor which provides for financial compensation to the policy holder in the event of failure of the rescue mission to move the satellite from an unintended orbit to an intended orbit.

12. A method of insuring against satellite failure including rescue reservations comprising the steps of:

purchasing a satellite for orbiting the earth;

obtaining a launch insurance policy including a rescue mission provision from a guarantor covering the unintended launch of the satellite into an unintended orbit, the rescue mission provision providing for the payment for initiation of a rescue mission, as opposed to simply paying out money to the insured, in the event that the satellite is launched into an unintended orbit, the rescue mission provision specifying that the rescue mission shall result in the movement of the satellite from an unintended orbit to an intended orbit;

unintentionally launching the satellite into an unintended orbit so as to trigger the rescue mission provision;

paying for the initiation of a rescue mission by the guarantor;

obtaining a rescue mission failure insurance policy from a guarantor against failure of the rescue mission to move the satellite from an unintended orbit to an intended orbit to provide monetary compensation for the loss of the satellite;

initiating a rescue mission in an attempt to rescue the satellite by moving the satellite to an intended orbit resulting in an unsuccessful attempt to rescue the satellite; and

providing financial compensation for the loss of the satellite by the guarantor to the policy holder of the rescue mission failure insurance policy.
